Data collection in the form of psychological well-being questionnaire consisting of 85 items statements adaptation psychological well-being scales theory C.D Ryff. Data obtained ordinal form of data. The results showed as much as 68.4% of PLWHA has reached psychological well-being, and 31.6% of PLWHA has not achieved psychological well-being.*

Kata kunci: *psychological well being, PLWHA*

1. Pendahuluan

AIDS (*Acquired Immunne Deficiency Syndrome*) adalah salah satu kondisi dimana individu yang menderitanya memiliki kemungkinan kematian yang sangat tinggi (Sarafino, 2006). AIDS disebabkan oleh infeksi suatu virus yang dinamakan *Human Immunodeficiency Virus* (HIV) yang menyerang sel-sel darah putih. Hal tersebut berakibat pada rusaknya daya tahan tubuh, yang menyebabkan individu mudah terserang infeksi dari berbagai mikroorganisme dengan gejala lebih parah, bahkan dapat berakibat fatal (Taylor, 2006).

Implikasi dari HIV/AIDS ini sangat luas meliputi hal yang bersifat fisik, psikologis, dan sosial. Implikasi yang berkaitan dengan fisik misalnya menurunnya sistem kekebalan tubuh sehingga tubuh menjadi rentan terhadap berbagai macam penyakit. Implikasi psikologis misalnya menjadi mudah marah atau kesal, hilangnya rasa percaya diri, munculnya rasa frustasi atau mudah putus asa dalam menjalani kehidupan, serta konflik yang muncul ketika mereka dihadapkan pada keharusan untuk membuka statusnya kepada teman, sahabat, psangan, dan anggota keluarga yang akan
