ABSTRACT

The era of communication and technology has been a particular challenge for early childhood education, because the use of communication media without filter for early childhood may hamper the development of the child, even causing deviant behavior. Television, smartphones and gadgets are examples of technology product that is very close to early childhood. The presence of communication media and technology products have replaced the warmth of communication between children and parents, the lack of time to help the child developing their motoric aspects, socio-emotional, and weak religious and moral guidance. Spiritual intelligence of parents can be a shield from bad influence of communication media in educating children. Spiritual intelligence of parents is a capital in developing a child's intelligence. The development of spiritual intelligence of children should be a priority, because of the good development of spiritual intelligence of children will control the development of other intelligence. Efforts to accelerating spiritual intelligence of the child can done by get closer to Allah in every child's activity. Technology products and communication media can be used as media in the development of spiritual intelligence only if selected and programmed according to child development.

Key Word: Spiritual Intelligence, Early Childhood, Communications And Technology

INTRODUCTION

One of the characteristics of life in the era of globalization is more easily to get information from various parts of the world regardless of time and space. Advances in technology have facilitated a variety of human affairs, accelerate the dissemination of knowledge, and also accelerate changes in the dynamics of the community. All aspects of life have been affected by technology and communication media, including the lives of young children. Nowadays the electronic media like radio, television, VCD, mobile phones, Smartphone/ gadgets and etc become very urgent, even for people in remote areas. Various electronic media that serves a variety of attractive offers, exciting, even some people spend most of their time with electronic media, rather than work, study, read, discuss, create, develop talent-interest or hobby to something more productive. This condition can be observed in family life; how many family members spend their time in front of the television, how much time is spent together with their gadgets, and how much time to chat with family, having chats, and how many times for work, how many time used by children to learn and develop their talent.
