### **Introduction**

Islamic economic macro models can be broadly divided into two categories. Both categories ignore the neoclassical microfoundations based on the utility-maximizing individual, the profit-maximizing firm, the typical macroeconomic agent and the different versions of strict rationality attached to an all-knowing decision-making unit. Both approaches give due attention to the importance of equity and the role of *Zakah* and *Awqaf* in providing a significant share of public services.

The first category was inspired by Mannan (1970), Siddiqi (1981, 2006) and Chapra (1985, 1996) and elaborated by Khan and Mirakhор (1994) and Iqbal and Mirakhор (2011), in addition to Mirakhор and Zaidi (2007). This profit and loss sharing (PLS) approach implicitly assumes a pure equity-based system and draws important conclusions about its efficiency, equilibrium, and stability. Meanwhile, it ignores the institutional details of the monetary and financial structure. When discussing monetary policy, the traditional policy tools are usually listed, with the exception of those that use the rate of interest. The neoclassical straightjacketing into a stable equilibrium remains.

The second category proposes a detailed institutional structure of the monetary or financial sector of an Islamic economic system. This structure has distinctive features that distinguish it from the conventional one. It includes the following:
